

Numpy

→ Numpy is a python library that provides a simple yet powerful data structure: n-dimensional array

[1, 2, 3, 4]
List

[[1, 2, 3], [3, 4, 5]]
list of lists.

In numpy we have n-D array (ndarray)

→ On top of numpy most of powerful Python data science tool is built. Ex: SciPy, scikit-learn (sklearn)

Benefit of using Numpy :-

(1) More Speed : Numpy executes faster because it is internally built in C.

(2) Fewer Loops :- Numpy offers vectorization which greatly reduce loops overhead.

(3) Open Source Community :

What is a library in the context of python

```
add()  
...  
subtract()  
...  
product()
```

python file.
matrix.py

```
import matrix
```

matrix.add(...)

matrix.product()

}

```
import matrix as mat
```

mat.add()

mat.product()

'mat' is alias of "matrix"

```
import numpy as np
```

np is alias of numpy.

8-bits (1 byte)

16-bits (2 bytes)

32 bits \rightarrow 4 bytes.

64 bits \rightarrow 8 bytes.

`np.array([1, 2, 3])`

\downarrow
int32, 8 bits (1 byte)

123 * 321765723519

`np.array([1, 2, 3], dtype=np.int8)`

\downarrow
int8

8 bit unsigned integer
one can store value up to 255

0, 1, 2, ..., 255

0, 1 \rightarrow base-2 numbers.

(base 2) Boolean

Decimal (base 10)

0	0
1	1
10	2
11	3
100	4
101	5
110	6
111	7
1000	8
1001	9
1010	10
⋮	⋮

10000 \rightarrow 16

2^7	2^6	2^5	2^4	2^3	2^2	2^1	2^0
0	0	1	1	0	1	1	0

$$0 + 0 + 1 \times 2^5 + 1 \times 2^4 + 0 \times 2^3 + 1 \times 2^2 + 1 \times 2^1 + 0 \times 2^0$$

$$32 + 16 + 4 + 2$$

54

2^3	2^2	2^1	2^0
1	0	0	0

$$8 + 0 + 0 + 0 = 8$$

2^7	2^6	2^5	2^4	2^3	2^2	2^1	2^0
1	1	1	1	1	1	1	1

$$2^7 + 2^6 + 2^5 + 2^4 + 2^3 + 2^2 + 2 + 1$$

$$= 255$$

$$2^8 - 1 = 256 - 1 = 255$$

Signed numbers (+ve / -ve)

sign-bit

(0 → +ve)
(1 → -ve)

-128 to +127

$$-2^{8-1} \text{ to } (2^{8-1} - 1)$$

$$= -2^7 \text{ to } (2^7 - 1)$$

→ -128 to +127

n-bit number

<u>unsigned</u>	}	<u>signed</u>
$2^n - 1$		-2^{n-1} to $+(2^{n-1} - 1)$

numpy.linspace

num → the numbers
you want between
start & stop.

$\text{np.linspace}(\text{start} = 0, \text{stop} = 20, \text{num} = \underline{11})$

✓ 0, 2, 4, 6, 8, 10, 12, 14, 16, 18, 20 ✓
 └─┘ └─┘ └─┘ └─┘
 2 2 2 2

common difference. (d)

$$d = \frac{\text{stop} - \text{start}}{\text{num} - 1}$$

1-D array
 $a.shape = (4,)$

2-D array
 $b.shape = (4, 5)$

$c.shape = (5, 4, 2)$

3-D array.

$y =$

	$\xrightarrow{1}$		
	$\overset{0}{-}$	$\overset{1}{-}$	$\overset{2}{\checkmark}$
\downarrow	1	2	3
0	4	5	6
1	7	8	9
2	10	11	12
\checkmark 3			

$y[:, 2]$ \rightarrow along axis-1 consider only index-2
 \downarrow
 along axis-0 consider all indices.

$x = [1, 2, 3, 4, 6, 7]$

$x[-1] = 7$

$y[-1, -1] = y[3, 2] = 12$

$y[1:3, 2] = [6, 9]$
 \downarrow index-1, 2 along axis-0 \checkmark
 \downarrow index-2 along axis-1 \checkmark

axis-0
 \downarrow

	$\text{axis-1} \rightarrow$		
	0	1	2
0	1	2	3
